EMERGE Gender Questions
Women’s Agency in Family Planning

This module focuses on women’s agency in family planning (including fertility, fertility planning and contraceptive use). Measures included in this module focus on self-efficacy, voice/communication, decision-making, contraceptive choice and autonomy, fertility pressures and reproductive coercion, and respect in family planning counseling, and are designed to be asked of women. We do not in this module focus on contraceptive behaviors and fertility outcomes (parity, abortion, etc.), and instead recommend use of Demographic Health Surveys and PMA2020 for these behaviors and outcomes.
